Two Sum

Technical

Write Code

Easy

Problem Description

3.75/5

Given an array of integers nums and an integer target, return indices of the two numbers that add up to target. There is exactly one solution, and you may not use the same element twice.

Examples

Input: nums = [2, 7, 11, 15], target = 9
Output: [0, 1]
Explanation: Because nums[0] + nums[1] == 9, we return [0, 1]

Input: nums = [3, 2, 4], target = 6
Output: [1, 2]
Explanation: Because nums[1] + nums[2] == 6, we return [1, 2]

Hints

- Hint 1
- Try using a hash table to store values you’ve seen.
- Hint 2
- Hint 3
